Conclusion

most important

- what do you want the audience to understand?
- make your slides easy to digest
 - abstract, summarize, leave out details, use figures
 - think of slides as orthogonal mean to convey your message
- mastery of technology is important but less important than the message
 - use a lean feature set of your presentation program
 - think about reducing content of the slides
- important rule of thumb: **at most one slide every second minute**

- try to speak free (and loud!)
 - this skill needs to be practiced
 - but helps you to produce good talks fast
 - so why not try it out in this seminar?
- make (eye) contact with your audience
 - check whether you loose them
 - in case you do
 - * do not hesitate to skip complicated details
 - * or recapitulate parts of the talk
- be friendly (and prepared) in case of questions
